Company Profile

We develop products for the pharmaceutical industry
Sercona GmbH was founded in November 2008 as a subsidiary company of the HWI Analytik GmbH and provides comprehensive support in API management and drug formulation development.

In our new clean-room laboratory we can develop and manufacture solid, semi-solid and liquid formulations under EU-GMP conditions and according to ICH guidelines in small to medium-sized batches. We also carry out work with toxic and hazardous substances up to OEB level 4.

Core Competencies (engl.):

We provide drug development and manufacturing of clinical batches in GMP-certified laboratories with established clean-room concept (clean-room class B to D), SHE management system, risk-based handling of active ingredients up to OEB level 4 and Isolator technology.

Our core competences are risk-based product, development for solid, semi-solid and liquid formulations, instant-release, delayed-release and prolonged-release formulations.

The starting point of our R & D activities is always the active pharmaceutical ingredient (API).

Our API management includes API search and physiochemical determination of polymorphism, compatibility, solubility and particle size.

With our sector-wide approach to project management, we are able to provide comprehensive and customised services that cover the entire product life cycle.
