

PharmaForum - 3. November 2010 in Mainz

1. Company

bio.logis GmbH was established as an independent startup in 2008 and is located at the "Frankfurt Innovation Center Biotechnology (FIZ)".

bio.logis mission is to provide customers with information about their genetic make-up in a medically and ethically responsible manner and enable customers to make informed decisions regarding health and lifestyle.

bio.logis is the *genetic information company* with a unique combination of excellence in medical science, laboratory operations and the development of IT-systems for the management of biological and medical data. The team of 30+ people is composed of experienced physicians, scientists, technicians, IT experts and economists most of whom have worked together in the area of human genetic diagnostics for many years.

2. Services provided

Medical Genetics:

bio.logis provides genetic counseling and genetic diagnostics for patients and physicians. The services provided cover the full spectrum of molecular genetics, cytogenetics, biochemical genetics and kinship testing.

Personal Genomics Service (PGS):

Through its unique *Personal Genomics Service (PGS)* bio.logis provides individuals with access to their personal genome. PGS delivers actionable genetic information that has been scientifically proven to enable better health- and lifestyle-related decisions including e.g. the identification of genetic variants related to the efficiency and side effects of pharmaceutical treatments. PGS will be available later this year.
