NanoBioNet – The Network of Competence for Nano- and Biotechnology

NanoBioNet is an efficient network of universities, research institutes, clinics and businesses from the areas of development, production, industry and commerce and technology transfer. The members come from various sectors such as biotechnology, the chemical nanotechnology or medical technology. Each individual member contributes to a broad spectrum in the process, which makes the system attractive for all participants. All of the members are interested in research and development, as well as the practical applications of nanotechnology and biotechnology for the creation of marketable products and new jobs – and achieve this through an ethically justifiable technology.

In the region of Saarland/Rhineland-Palatinate, many researchers are performing pioneer work in the field of nanotechnology and biotechnology. Their achievements form the core of the NanoBioNet because they deliver the know-how that benefits research, industry and trade. The non-profit association of NanoBioNet was founded to accelerate the interaction between research, commerce, politics and society. It moderates the network and actively expands it – beyond the national borders. New products, processes and services represent the top research, innovations and growth of the region.

NanoBioNet e. V.

Martin Monzel

Science Park 1

66123 Saarbrücken

Core Competences

Technology Promotion and Consultation

- Support of SMEs through financial sponsorship of feasibility studies
- Professional technology scouting
- Competent consultation on all issues related to nanotechnology and biotechnology

- Supervision of research and development projects
- Support in the search for the appropriate sponsorship programmes for projects
- Support in the search for project partners
- Help in submitting and processing applications

PR and Marketing

- Support in the area of press and PR work
- Organisation of events and lectures
- Procurement of competent references in the areas of nanotechnology and biotechnology, life sciences and materials sciences...

Advanced Training

- Development of advanced-training modules in the area of nanotechnology
- Arrangement of traineeships and graduate positions at research facilities and companies of our network for students
- Guided tours through the "Demonstration Centre for Nanobiotechnology" at the Saarbrück Science Park

Cooperations offered and requested

If you want to

- Conquer New Markets
- Make New Business Contacts
- Draw on the Strengths of a Network

Become a Member of NanoBioNet e. V. !
