Fax: +49(0)6131 57636550
Internet: www.pharmgenomics.com
E-Mail: info@pharmgenomics.com

Number of employees: 10

Foundation year: 2008

2. Core Competences

PharmGenomics GmbH is a young innovative company in the area of pharmacogenetics and individualized medicine. We specialize in the development and distribution of pharmacogenetic tests for clinical applications.

Our products are based on a new microarray technology. This technology enables the introduction of pharmacogenetics into daily medicine for the first time.

We develop such IVD tests for a series of bio-markers in the area of DNA, mRNA and proteins.

The main advantage of this platform is the use of a non-fluorescent colorimetric detection method, which makes the system easy-to-handle and cost-effective. This approach is well suited for small laboratories. In addition, our system is designed for the development of highly multiplexed assays.

This new generation of microarray chips has the following advantages compared to other systems on the market:

- Novel detection method
- Simple read-out
- Easy to handle
- Less hands-on-work time
- Very cost-effective
- Little space required

The MISSION of PharmGenomics is, to further research in pharmacogenetic approaches to individualize patient therapies. We deliver responsible and innovative products and services based on our specific expertise in pharmacogenomics. We wish to make an important contribution to individualized medicine, a progressive and modern medicine.

3. Cooperations offered and requested

- Theranostics developments for pharmaceutical companies
- Genotyping services for clinical trials
- Contract developments for point-of-need nucleic acid tests or microarrays
