

Dr. Joerg Rosenberg

Dr. Joerg Rosenberg is director in the formulation development department of Abbott GmbH & Co KG in Ludwigshafen/Germany and Research Fellow of Abbott's Volwiler Society. In his current function, he is leading a group that develops new drug product formulations from early feasibility up to production-scale. After receiving his PhD in organic chemistry at the Free University of Berlin/Germany, Dr Joerg Rosenberg started his industrial career at Knoll/BASF Pharma in 1986 and started formulation and process development work for the new melt extrusion technology. After Knoll/BASF Pharma was acquired by Abbott Laboratories in 2001 he focused his work on several drug product development projects of poorly soluble drug substances by using melt extrusion technology. This work paved the way for the successful FDA approval of Abbott's Kaletra Meltrex product launch in 2005.
