Our Question:

How can temperature sensitive drugs be transported safely?

PROBLEMS & TRENDS

Cold chain logistics is facing

... major problems

... and major **trends**:

560.000.000 Euro of **damage** due to temperature excursions

2°C

rise of **temperature sensitive** drugs

high logistics **cost** and rising **complexity** of logistic routes

packaging waste and disposal

rising regulations due to the GDP, GSP and FDA

direct-to-patient delivery

Why won't these...

...problems be solved

... and **trends** be matched?

Packaging and logistic **errors**, missing warning functions, no cooling control intervention 2°C

No tracking or insufficient tracking via external logger

Elaborated **pre-conditioning** and complex logistic procedures

Mainly **single-use** box and logging solutions

Qualification only through "**risk profiles**"

No appropriate and **save** storing solution at the patients home

Question:

Why is there no active solution on the market yet?

WHY DOES IT MATTER?

Two **technological reasons**

1. Compressor cooling

→Not position independent

 \rightarrow High installation space

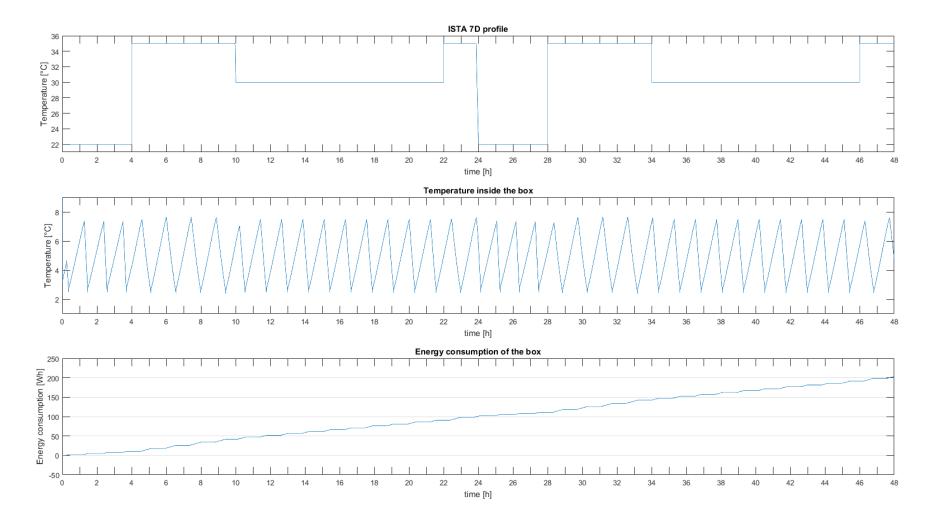

2. Thermoelectric cooling

→Energy-inefficient

→Very low, yet inacceptable runtime and weight

Smart-Insulation-Technology:

USP PHARMA LOGISTIC

All-In-One System Solution

- no measuring errors
 - process optimization
- cost reduction
- high flexibility

- ✓ no packaging waste
- high robustness
 - cost reduction
- CO2 impact

OUR CUSTOMERS

The perfect transport solution for ...

- → pharmaceuticals (clinical trial / pharma retail)
- \rightarrow "direct-to-services"
- → samples for research & development
- → blood & doping tests
- → corneas to hospitals for transplants
- \rightarrow cytostatics
- → tissue for research & development
- → surgical sealant
- → bloodbanks & plasma collection
- \rightarrow specimen

- ... and thus our customers:
- → pharma logistics providers
- → clinical research organizations (CRO)
- → sponsors
- → on-board-couriers
- → clinical supply managers (CSM)
- → pharma contract manufacturers
- → laboratories
- \rightarrow clinics
- → bloodbanks
- \rightarrow aid workers
